What *is it?*

Lets learn about the dataset

Flight Status Prediction Dataset

- Its a dataset hosted on Kaggle.
- The dataset source : TranStats data,
- Time period (January 2018 -2022)
- The file formats available (CSV and Parquet).
- 120 columns, 5 csv(approx 3M rows)

Why data Visualization?

- Clarity and Understanding
- Storytelling
- Decision Support
- Impactful Communication

Data Exploration

- Fetching data

```
flight_data.shape
```

```
(429036, 61)
```

- Handling Missing Values
Fillna and dropna
- Data Types Conversion
Datetime conversion, 0,1 to True false

      'CRSDepTime', 'DepTime', 'DepDelayMinutes', 'DepDelay', 'ArrTime',

Statistical Analysis

- Normalization Test:
Ks_test, shapiro test daugustino test.
Implemented in dash
- Created the plots to show the
normalization: Used Boxcox
transformation to convert it to gaussian
distribution
- Noticed most columns were right
skewed

PCA

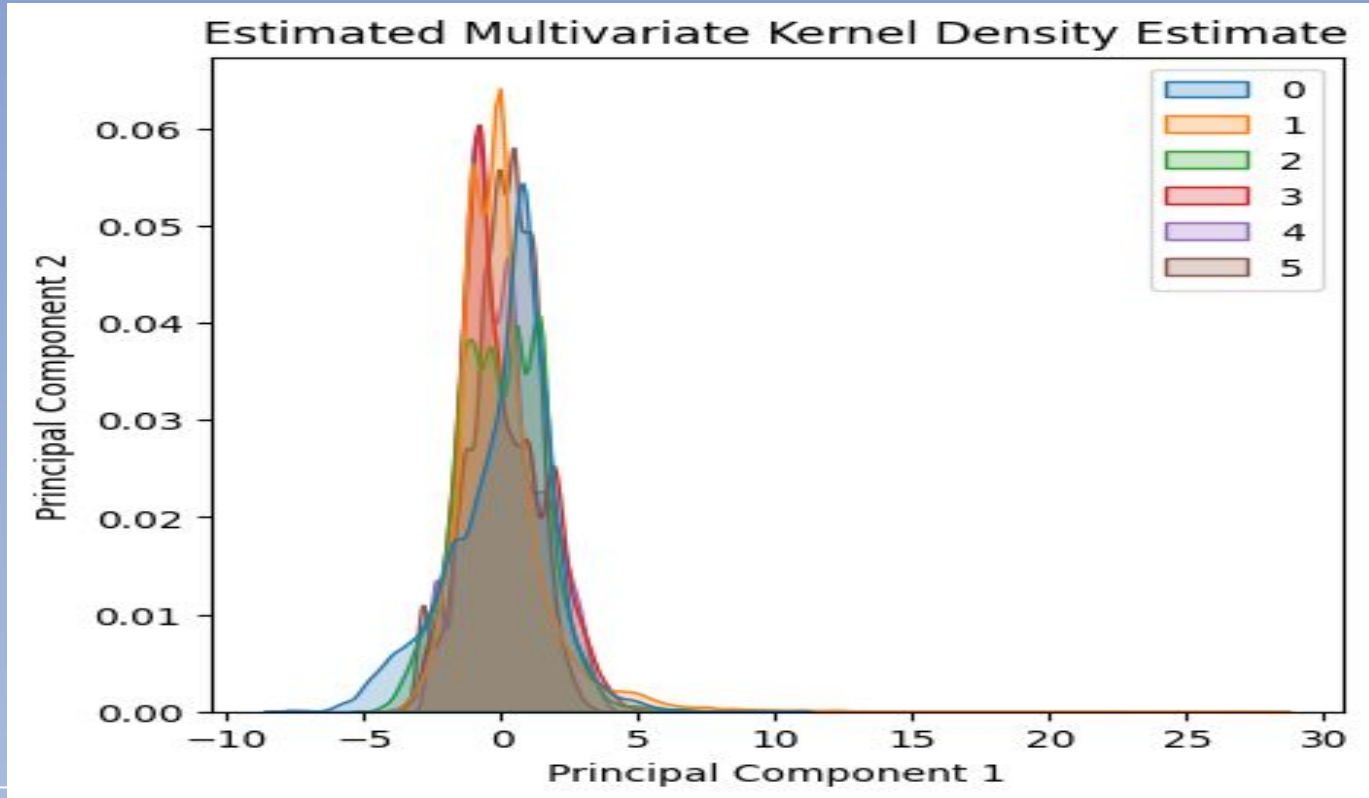

Number of features needed for 95% explained variance: 31

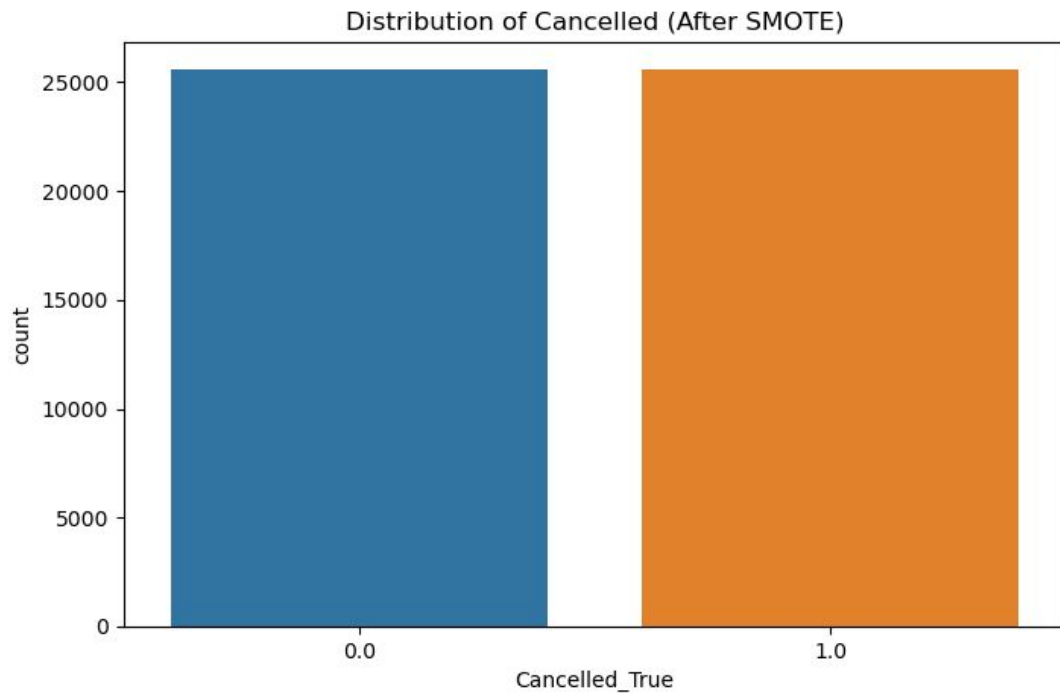

Condition Number: 2.1534166360430776e+16
